

Facilitator: Mona Kilsgård

Participants: Joakim Agnemyr, Edwin Eliasson™, Viktor Valadi, Mona Kilsgård

Not in attendance:

Date: 2018.10.24

Meeting Agenda

§1 Objectives

- We need to discuss peer review.
- We need to discuss presentation.
- We need to discuss final steps in our project.

§2 Reports

- We've worked on all assignments from last week along with checking for even better solutions for MVC combined with JavaFX. We've come to the conclusion that our implementation has shortcomings but there are not many ways to do a "pretty" and "correct" MVC while using JavaFX. People seems to have many ways to interpret what MVC is and what is not and we will run with our implementation that we have at this moment. What our choices is and why we have chosen them will be explained in our SDD and during our presentation.

§3 Discussion Items

1. When and how do we do our peer review?
2. What should we include in our presentation and how will we structure it?
3. What last implementations will be made?

§4 Outcomes and assignments

Outcomes:

1. We will complete the peer review directly after this meeting by following the guide on the course webpage. The review will be placed in our documentation folder in our repo until (or if) we get any other directions from Joel.
2. We will demonstrate our application and present our different user stories along the way. Implementations that we have had problems with and solved in a nice way will be highlighted. We'll also go through our model and how we have chosen to structure it. Pictures that describes things such as dependencies, design principles and our model will be shown on a PowerPoint presentation. We need to have a common thread in our presentation so our audience can keep track of what we are talking about.
3. The adding of images should be done and we'll try to fix the showing part of the group invite codes along with selecting groups/inventories while creating inventories or items. If this goes quickly we'll try to implement the return of orders. We'll also need to go through our tests and see if they cover all of our requirements from our User Stories. Otherwise the focus will lay on getting our documentation in order.

Assignments:

1. Viktor will try to fix the highlighting of chosen/clicked objects and fix a small problem with the snackbar.
2. Mona will work on images.
3. Joakim will work on the SDD and add more pictures to it.
4. Edwin will work on cleaning up the code and fixing the group invites.

§5 End of Meeting

Next meeting is 2018-10-28
