

Facilitator: Mona Kilsgård

Participants: Joakim Agnemyr, Edwin Eliasson, Viktor Valadi, Mona Kilsgård

Not in attendance:

Date: 2018-09-28

Meeting Agenda

§1 Objectives

- We need to discuss our User Stories.
- We need to discuss our schedule.
- We need to discuss GUI.
- We need to discuss JavaDoc.
- We need to discuss sequence-diagrams.

§2 Reports

- Our main task has been to get our github/travis to work. At this point we think it works fine. We have created a new repositories where our project is not placed in any folder. In this way we got travis to work. Our documentation will from now on be placed in a map in our Yellow project.
- While Edwin and Viktor worked on our travis problem, Joakim and Mona has tried to structure all our User stories/Epics and made approachable tasks to these.
- Last but not least we have started our with our coding. We have tried to follow the user stories and work parallel to each other. It's been a bit of a challenge and that's why we might need to rework some of them.
- Joakim has made it possible to create an inventory in the group class. The inventory is added to a list.
- Joakim and Edwin has made it possible to create items and put them in an inventory in the inventorylist.
- Joakim has made it possible to remove an item from the inventory.
- Required getters and setters has been created for the things listed above.

§3 Discussion Items

1. How can we make our User Stories better and "easier to work with"?
2. When should we have our meetings/work time next week?
3. What should we do with our GUI now when we are working with a desktop application instead of Android?
4. How should we work with JavaDoc?
5. When and on what should we do sequence-diagrams?

§4 Outcomes and assignments

Outcomes:

1. We need to rework our Epics. After reading more about User Stories we have understood that a Epic should not have as many User Stories that ours has at this point. We have asked Joel to

look at our trello. Therefor we will wait with our changes now until we have talked to him at our meeting this afternoon.

2. We have booked work time and meeting time in our project calendar for next week.
3. We'll try to work with our old GUI but make the window bigger. At this point we use our old drawings until we feel a need of remaking them. We will use JavaFX and Scenebuilder.
4. We should work with JavaDoc. From now on we will try to update everything and also comment our code well.
5. We start with making one diagram today directly after this meeting. It should focus on Users creating groups, inventories and adding items with ID's.

Assignments:

1. Edwin will work on the search function in the inventory.
2. Mona will work on the users joining a group.
3. Viktor will work on the ID class, with a generator.
4. Joakim will start researching JavaFX with Scenebuilder.

§5 End of Meeting

Next meeting is tuesday 2/10-2018 08:00.
